

Content

A Cleaning	9
1. In general	9
1.1 Sieve and air separation	9
1.1.1 Sieves	9
1.1.2 Sieve covers	11
2. Air and air recirculation	12
3. Cleaning machines	12
3.1 Coarse cleaning	12
3.1.1 Drum sieves	12
3.1.2 Sieving machines	14
3.2 Preliminary cleaning	15
3.2.1 Separators/Sieving machines	15
3.2.2 Aspirators and air-recirculation aspirators	23
3.2.3 Magnetic separators	27
3.3 Mill screen room (Machines for 1 st cleaning)	30
3.3.1 Dry stoners	30
3.3.2 Trieur installations	33
3.3.3 Combination machines	42
3.4 Gravity separators	45
3.4.1 Light grain separators	45
3.4.2 Paddy separators	47
3.5 Color sorters	50
4. Machines for 2nd cleaning	53
4.1 Scourers	53
4.2 Peeling machines	55
4.3 Impact machines	58
5. Diagram symbols	59
5.1 Preliminary cleaning diagram for a grain silo	63
5.2 Soft wheat cleaning diagram with employment of a color sorter ..	64

B Grain damping, -cooling and -drying	66
1. Grain damping	66
1.1 Rate of water addition and its calculation	66
1.2 Kinds of water addition	67
1.2.1 Direct water addition	67
1.2.2 Automatic water addition	68
1.2.3 Vibration dampening	72
1.2.4 Tempering time and tempering bins	75
2. Grain cooling	75
2.1 In general	75
2.2 Aeration with unconditioned ambient air	77
2.3 Cooling units	77
3. Grain drying	79
3.1 Grain dryers in general	79
3.2 Layout of grain dryers	82
3.3 Example-/Estimate calculation	83
3.4 Direct or indirect gas fired air heaters	87
C Aspiration	88
1. General information on dust and its deposition	88
1.1 Dust particle sizes	88
1.2 Sink velocity of dust particles in the air	88
1.3 Dust deposition and degree of dust removal	88
2. Configuration and functioning of aspiration arrangements	89
3. Air pressure and air resistance	90
3.1 Dynamic air pressure	91
3.2 Static air pressure	92
3.2.1 Calculation of the air aspiration tube diameter	93
3.3 Total pressure difference Δp_g	96
3.4 Air volume	97
4. Dust separation equipment	99
4.1 Filter	99

4.2 Discharging airlocks	103
4.3 Small filters	106
4.4 Example for the determination of filter and centrifugal fan	109
4.5 Dust separators	110
4.5.1 Centrifugal dust separators	110
4.5.2 Gravity dust separators	112
4.5.3 Centro dust separators	112
5. Air current generators	113
5.1 Radial ventilators	113
5.1.1 Example calculation of the proportionality rule	115
5.1.2 Calculation of Δp_g and V_L	115
5.1.3 Characteristic curves for centrifugal fans	116
5.2 Displacement machines	116
5.3 Axial fans	117
D Grinding	121
1. Roller mills	121
1.1 Design and material of grinding rolls	121
1.2 Roller hardness and surface structure	122
1.3 Roll processing	122
1.3.1 Grinding	122
1.3.2 Flutes (Corrugations)	123
1.4 Grinding effect (specifications)	126
1.4.1 Roll diameter and grinding zone	126
1.4.2 Rotation speed and differential	127
1.4.3 Specific load – impingement	128
1.4.4 Tables of common fluting values	128
1.4.5 Grinding gap and sieve analysis	130
1.4.6 Specific loads and energy demand	130
1.5 Specification of roller mills	130
1.5.1 Configurations	130
1.5.2 External dimensions of roller mills	132
1.6 Roller bearings and roller package	135

1.7 Intake and feed device	137
1.8 Roller mill drive and differential	139
1.9 Roll scrapers	140
1.10 Water cooling	141
1.11 Direct pick up	141
2. Millstones	141
3. Impact mills	145
4. Hammer mills/rotor mills	150
5. Auxiliary milling machines	153
5.1 Detachers	153
5.2 Bran and break centrifuges (finisher or duster)	155
6. Sieving machines (Sifters)	158
6.1 General information on sieving and sifting	158
6.2 Clothing (sieve covers)	158
6.3 Beater sieving machines	159
6.4 Plansifter	163
6.4.1 General information	163
6.4.2 Structural forms	165
6.4.3 Drives	174
6.4.4 Suspension	174
6.4.5 Single box plansifters	174
6.4.6 Two box plansifters	176
7. Purifiers	177
8. Flour fractioning by fine grinding and air classification	178
9. Control devices for the milling process	181
9.1 Yield (extraction) control	181
9.2 NIR Online measuring appliances	183
9.3 Flour color measuring appliances	185
9.4 Overview of basic units	186
